

Safety Device's – Finger Guards/Safety Sensors

Overview -

We regard safety as one of the most important things here at ADS that's why with every quote we always recommend that safety sensors and finger guards are installed.

These two safety devices are vital in the automatic door sector, protecting the user and non-user from accidents that may occur preventing them before they can even happen.

In some situations finger guards and safety sensors will be a mandatory item for example if the surveyors deems a person or people within the household a higher risk or in any communal door situation they will be a required item to install on an automatic door.

Finger Guards Specification –

- Suitable for most single and double action doors including automatic doors
